FULL-STACK DEVELOPER

A full stack Software Developer with a background in HTML, JavaScript, CSS, React.js, and responsive web design. Passionate about updating and creating new apps that are both fun and useful. With each project, keep the user in mind and adjust to improve the user's experience. Thrive working both independently and as a team member to create various applications. Excited to join a collaborative team to create great applications that will impact people's lives positively.

SKILLS

JavaScript | HTML | CSS | SQL | jQuery | React.js | Python/Django | Aws s3 | PSQL | Node Js | MySQL | MongoDB | Git | Github | Heroku | Postman Mongoose | Express & Handlebars JS | APIs | Third Party Frameworks such as Bootstrap and Materialize | Teamwork | Communication | Problem Solving | Time Management | Quality Assurance | Training

SOFTWARE DEVELOPMENT PROJECT EXPERIENCE

Knight Fall | Story Based RPG | Demo | Git-Hub

- Full stack application created with React in a team of 5.
- Operated in the back-end creating the routes, databases, and server files.
- Assisted in the development of the signup authentication and log in.

Dream Garage | Website: Search and Collect Cars | Demo | Git-Hub

- Full-Stack application built using Node and Express server, a Sequelize database and jawsdb on heroku.
- Utilized data from MarketCheck API to display on the website.
- Applied resources from the Materialize framework.
- Used Handlebars to dynamically create the website and set up all of the reusable code in a separate file.

Job Tracker | Website to keep track of job applications | Demo | Git-Hub

- Developed with Python/Django. Full-Stack application applying full CRUD functionality.
- Utilizing PostgreSQL to manage user databases and AWS S3 bucket for user uploads.
- Created with the use of Materialize framework.

Proud Creations | A website in which a user can share anything they are proud of | Demo | Git-Hub

- Full Stack Node/Express/MongoDB app.
- Integrated the use of Multer npm to let users upload files.
- Applied passport and google auth to let users sign-in using their google accounts.

Jose's Minesweeper | A replica of the classic minesweeper game | Demo | Git-Hub

- Developed with HTML, CSS, and Javascript
- Integrated multiple recursive functions to aid the functionality of the game.
